BELMONDO® Rodeo

“Shock absorber” for the wall

Wall

More safety and calmness

Who isn't familiar with the loud banging of hooves against loosebox walls, be it due to food envy stress or not liking a new loosebox neighbor? These repeated kicks can, however, cause injuries to the horse and damage the wall. The BELMONDO® Rodeo impact protection mats not only prevent damage to the legs of a horse and the wall but also ensure more calmness in the stable. Horses often lose the desire to kick a wall, as the noise is significantly reduced. The vulcanized rubber of BELMONDO® Rodeo is extremely durable. The high-quality surface enriches a stable with an appealing wooden plank look. The surface is impermeable to water and easy to clean. It is a good idea to use curved washers from our product range when installing the mat – thus ensuring that a horse does not accidentally injure itself on the fixing. The impact protection is suitable for looseboxes as well as for service areas or veterinary clinics.

- **Shock absorbing**
- **Protects hooves and legs**
- **Prevents damage to walls**
- **Appealing wooden plank look**

Care and usage instructions:
Our flooring for horse husbandry is tested for its slip resistance under defined test conditions. However, the actual slip resistance in practical use depends on the relevant environmental and usage conditions. Especially moisture, dirt, mud, ice or snow, the slope, the condition of the ground and wear or damage can adversely affect performance characteristics. Individual factors such as hoof condition, shoe, health status and the animals' movement behavior also affect slip resistance. Surfaces must therefore be checked regularly according to the relevant usage conditions, maintained and kept in proper condition.
